ABOUT ME

Full Stack Developer with a background in frontend and backend development along with an understanding of the software development life cycle and excellent communication skills. My knowledge of **Object-Oriented Programming (OOP)** and programming languages such as **JavaScript, TypeScript** and **Java** enables me to quickly adapt to new technologies and programming languages according to the needs of the project and the team.

TECHNICAL AND SOFT SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript and React.

Backend: Java, Spring Boot, Spring Security, Spring Data (JPA/Hibernate) and MySQL.

Tools: Cloud with AWS, Docker, Git, GitHub, and Terminal.

Soft skills: Responsibility, respectful treatment of others, effective communication, teamwork and continuous learning.

EXPERIENCE

JavaScript Coach *Laboratoria | July 2022 - March 2024*

I accompanied bootcamp students in their web development learning: Facilitated individual and group sessions for more than 70 students to clarify doubts, and provided feedback on completed projects developed using technologies such as **HTML, CSS, JavaScript, Node.js** and more. Additionally, I conducted workshops primarily focused on **JavaScript**, covering topics like use of **Node.js** and **introduction to unit testing** for more than 30 students.

Collaborated with international teams using SCRUM methodology: Made data-driven decisions to enhance the bootcamp experience for students, working with people from different countries while maintaining constant communication and giving and receiving feedback.

Helped new coaches familiarize themselves with how to accompany students in their learning process: This involved providing feedback and advice, as well as leading sessions where we organized and developed strategies for our weekly work.

PERSONAL PROJECTS

TimeTalk API: **RESTful API** developed with **Java, Spring Boot, MySQL** and **Spring Security** with **JWT**, to ask questions, share experiences and make comments about watches. The **API** has been containerized using **Docker**.

Audiophile: Dummy e-commerce where you can 'buy' items like headphones or speakers. The site includes detailed information of each product, a shopping cart, a form to confirm a purchase order and much more. It was developed using **HTML, CSS, TypeScript, React, Redux and SASS (SCSS)**.

For more details and access to the repositories, including 4 additional projects, please visit my personal portfolio: **www.christianramirezlara.com**

EDUCATION

Colegio de Bachilleres del Estado de Querétaro Specialty in Computing (2016 - 2019)

Several resources of front-end and back-end technologies in a self-taught way (2020 - present)

LANGUAGES

Spanish (native language)

English (Intermediate) Capable of participating in conversations, understanding texts, and writing. Able to participate in interviews in English and committed to continuous improvement.
