ABOUT ME

I'm a JavaScript and TypeScript Developer with several technical skills that have been acquired by studying self-taught.

The comments about me from my latest leaders, workmates, and students whom I accompanied as a JavaScript Coach in my last work experience can attest to the commitment I have to do my job in an excellent way, my ability to demonstrate several soft skills with people, and my skills as a developer.

I began to acquire some backend skills with Java and Spring Boot as well as AWS and Docker a few months ago. I don't plan to stop acquiring new knowledge to become a more prepared developer. I am committed to learning any technology or knowledge necessary to perform my job effectively.

TECHNICAL AND SOFT SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript and React.

Backend: Java, Spring Boot, Spring Security, Spring Data (JPA/Hibernate) and MySQL.

Tools: Cloud with AWS, Docker, Git, GitHub, and Terminal.

Soft skills: Responsibility, honesty, punctuality, organization, communication, teamwork and continuous learning.

EXPERIENCE

JavaScript Coach *Laboratoria | July 2022 - March 2024*

I accompanied the bootcamp students in their web development learning: Facilitated individual and group sessions to resolve doubts, conducted workshops mainly in JavaScript, and provided feedback on completed projects.

Collaborated with international teams using SCRUM methodology: Made data-driven decisions to enhance the bootcamp experience, working with people from different countries.

Helped new coaches familiarize themselves with how to accompany students in their learning process: This involved providing feedback and advice, as well as leading sessions where we organized and developed strategies for our weekly work.
